

Multicultural Apprenticeship Program (MAP)

July 9 – August 4, 2017

Audience

The Multicultural Apprenticeship Program (MAP) serves 10 high school students in grades 10-11 with a strong interest in science and math and other academic areas. Student selection is based on interest, application, and academic performance.

Funding

The College of Agriculture & Natural Resources funds MAP.

Background

MAP was designed to identify students interested in pursuing a degree in agriculture and natural resources at Michigan State University. The program was established to reach out to students who have had to overcome significant obstacles, who exhibit leadership skills, and who otherwise would not have the opportunity to participate in a challenging university preparatory program.

Objectives

MAP aims to accomplish multiple objectives:

- To encourage program participants to graduate from high school.
- To prepare high school youth for success in post-secondary education.
- To expose students to majors and career opportunities in agriculture and natural resources.
- To assist in recruiting students from non-traditional backgrounds to fulfill career pipe-line needs in agriculture and natural resources.
- To ensure students understand the post-secondary application process.

Description

MAP is a four-week residential program emphasizing research experience for high school students in grades 10-11 who demonstrate academic talent and indicate a strong interest in science, agriculture, natural resources and related disciplines. MAP students are matched with CANR faculty members to work on a research project, whereby participants gain hands-on experience in a variety of laboratory and field research activities. Beyond hands-on research projects, participants have close interaction with program peers, faculty and professionals. Selection into the program is competitive and involves a selection committee that consists of faculty and staff from the College of Agriculture and Natural Resources.

Major and Career Areas of Emphasis

Beyond research experience, participants in the program gain exposure to the following majors in hopes of filling the need for critical masses of professionals addressing local,

state and global ANR issues and challenges: Agribusiness Management, Food Industry Management, Environmental Economics and Policy, Animal Science, Biosystems and Agriculture Engineering, Community Sustainability, Entomology, Fisheries and Wildlife, Food Science and Human Nutrition, Forestry, Horticulture, Packaging, Planning, Design and Construction and Fields of Plant, Soil and Microbial Science.

Outcomes

100% of participants strongly agree or agree they plan to attend college.

100% of participants strongly agree or agree they will attend college the semester after graduating high school.

100% of participants strongly agree or agree MSU is one of the colleges or universities they will apply to or have already applied to.

90% of participants strongly agree or agree they know the process of applying to college.

100% of participants strongly agree or agree MAP better prepared them to attend college.

100% of participants strongly agree or agree there is much to learn about agriculture and natural resources.

90% of participants strongly agree or agree agriculture is a career consideration.

90% of participants strongly agree or agree natural resources is a career consideration.

Costs

Students participate in MAP free of charge. The program is supported by the MSU College of Agriculture and Natural Resources. Students are responsible for providing their own transportation to and from MSU over the four-week period.
